

COMMAND YOUR RAIL SHIPPING

RSI RAIL
COMMAND®

Built by Rail Shippers FOR RAIL SHIPPERS

When RSI Logistics was founded by former railroaders over forty years ago, we used manual methods to manage rail shippers' logistics. Before long we recognized the need for a comprehensive solution that could automate all aspects of the rail shipping supply chain.

Today Rail Command, our Rail Transportation Management System (Rail TMS), is that solution. From end to end, origin to destination, shipper to receiver, Rail Command empowers your rail logistics to be more powerful than ever before.

PLAN your rail supply chain

From accounting to equipment to rates and beyond, Rail Command stores it all for you.

Before your rail shipment is even loaded, Rail Command is helping you manage every detail of your rail logistics. Features such as maintenance, Yard Management, equipment, and accounting store your information alongside specifics like demurrage rules and rail rates.

EXECUTE with any rail carrier

Automated execution throughout North America, on everything from Class I carriers to short lines.

Your entire shipment is executable straight from Rail Command and all necessary details are uploaded and stored for you. Shipment copies are retained and stored for you, and details of your shipment are connected to Rail Command's reporting.

MONITOR with both CLM & GPS

Whether in your rail yard or halfway between facilities, you have the tools to find your shipments.

From start to finish and everything in between, Rail Command empowers you to accurately monitor your operations. Diversions can be tracked, problematic railcars are identified with automated exception logs, and your railyard lifecycle is updated at every juncture.

OPTIMIZE and save time & money

Through comprehensive data visualizations, demurrage reporting, and automated exceptions.

Rail Command is designed for user friendly and robust reporting of your supply chain's numbers. Data visualizations, grid view reports, and a comprehensive data location comes standard. Outside of data visualization, you have the power to control demurrage charges and invoicing.

Rail Command PREMIUM SERVICES

Make your rail shipping simple and secured by putting our RSI Logistics team of experienced rail shipping experts to work for you.

A well-managed and competitive rail freight operation is essential for any organization involved in using rail as part of their supply chain. Leveraging our expertise, experience, and proficiency allows you to work smarter while we work harder.

Shipment Monitoring

FOCUS ON YOUR BUSINESS, NOT THE RAILROADS

We offer daily railcar tracking and expediting services, allowing you to focus on non-clerical tasks. Our services include proactive shipment monitoring, exception management, on-demand investigations, and railcar diversions.

Freight Bill Accounting

ELIMINATE FINANCE CHARGES AND OVERCHARGES

The RSI Logistics freight accounting team specializes in managing the freight audit process by thoroughly reviewing and verifying accuracy in invoices, disputing errors, and ensuring transportation costs are not unnecessarily inflated.

Rail Rate Management

CONTROL YOUR RAIL RATES

Our comprehensive rail rate procurement and rate database management services leverage our team's experience to provide rate estimates, actual quotes, and a managed rate database that includes adjustments for fuel surcharges and tariff changes.

Demurrage Management

MANAGE COSTS AND RESOLUTIONS

With our Demurrage Management service, through tailored solutions that enhance tracking accuracy and railcar movement visibility, our team enables proactive management practices that allow for the disputing of charges and proactive avoidance measures.
